

## Master Power Brakes Metering Valve Various Universal Applications p/n: VL3526K

Includes:	
Quantity	Description
1	Black Anodized Aluminum Body
1	Metering Valve
1	Rubber Cap

Thanks for the purchase of the Master Power Brakes Universal Metering Valve. The Metering Valve is intended to be installed into the front disc brake portion of a disc/drum system. This valve will slightly dampen the application of the front disc brakes in a heavy braking situation so the slower reacting drum brakes can catch up with the front disc brakes. This will help eliminate any “nose dive” the vehicle might experience.

### Installation Notes:

- Install in the front lines of the brake system between the master cylinder and the calipers. Valve can be used as a “T” to split the left and right corners or one of the ports can be plugged and used as an in-and-out. For port locations, see Figure 1 below.
- All ports are 3/8”-24 Inverted Flare
